

## AP® Computer Science A Magpie Chatbot Lab Student Guide

The AP Program wishes to acknowledge and thank Laurie White of Mercer University, who developed this lab and the accompanying documentation.

**Activity 4: Responses that Transform Statements** 

As stated previously, single keywords are interesting, but better chatbots look for groups of words.

Statements like "I like cats," "I like math class," and "I like Spain" all have the form "I like something."

The response could be "What do you like about *something*?" This activity will respond to groupings

of words.

**Prepare** 

Have available:

• the API for the Magpie class

• the API for the String class

• the code for the Magpie

the code for the MagpieRunner

a computer with your Java development tools

**Exploration** 

Get to know the revised Magpie class. Run it, using the instructions provided by your teacher.

How does it respond to:

• I want to build a robot.

I want to understand French.

• Do you like me?

• You confuse me.

**Exercises** 

Look at the code. See how it handles "I want to" and you/me statements.

Alter the code:

• Have it respond to "I want something" statements with "Would you really be happy if you had

something?" In doing this, you need to be careful about where you place the check. Be sure you

understand why. For example:

Statement: I want fried chicken.

Response: Would you really be happy if you had fried chicken?

9

• Have it respond to statements of the form "I *something* you" with the restructuring "Why do you *something* me?" For example:

Statement: I like you.

Response: Why do you like me?

Find an example of when this structure does not work well. How can you improve it?
